

Volunteer for STIMULUS

- help children learn in a local school

What?

Volunteer to help in a local primary or secondary school with mathematics, science or computing classes. You might help generally in the classroom, or work with a group of particularly able pupils, or help individuals who are struggling, or carry out practical work with small groups. We will ask you your preferences for subject and age-group, and you will normally work with the same classes each week.

Where?

Primary and secondary schools within the city. All are within 20 minutes cycle ride, and for those who don't cycle, several are within easy walking distance.

When?

For two hours or so each week, at a time which fits around your work. The commitment is for one term (about six visits) although many return for more.

Why?

- share your enthusiasm for your subject
- help children and young people
- develop your communication skills
- get to meet people outside university life
- find out what teaching might be like (but you don't have to be considering teaching as a career!)

Who?

Students in any year, undergraduate or postgraduate, studying mathematics or science related subjects.

You don't need to have any teaching experience; training will be provided, and the class teacher will explain what they want you to do.

Want to volunteer?

To apply for a STIMULUS placement this term, fill in the online application form (under 'Information for Volunteers' tab, 'Joining STIMULUS') at

stimulus.maths.org

Registration closes at midnight on
Friday 6 October 2017

If you have any questions, contact the STIMULUS Co-ordinator, Jacqui Watkins (jsw1001@cam.ac.uk)
